

Setting Up a New Round Robin

Judith Shackleton, Rolls-Royce Civil Large Engines, Derby, UK.
(Retired)

judithshackleton@compuserve.com

It is proposed to set up a new round robin for the $\sin^2\psi$ and \cos alpha methods
It has been quite some time since the successful study run the NPL

Some Thoughts???

- What are the most suitable type of samples to use (Shot Peened, Bent Bar?)
- Which alloys? (Ferrite, Austenite, Titanium, etc.?)
- What shape, (Curved? Flat?)
- How many samples?
- Who will prepare the samples?
- Who will send out the samples?
- Who will correlate the results?
- Shall we set up a mailing list??
- Are you happy to join in?? Is there anyone else you know of who would like to join in??
